Worthington was created in 1985 by a businessman that had ties to the architectural products industry. The intent of the creation of Worthington was to sell architectural products and use the profits to put his two children through college. After graduation, one of the two children was brought into Worthington to manage and operate it as a career. Through the 1990’s Worthington (known as “Worthington Group, LTD) had great success in delivering high quality products to custom home builders and homeowners through catalog sales. Around the year 2000, and for whatever reason, the owners at Worthington decided that this wasn’t the career path that they wanted to follow and Worthington closed its doors to the sale of its products.

One year later in 2001 a different group of individuals wanted to operate Worthington and asked the old owners if they would entertain the idea of opening the doors with the agreement that they would become 50% owner in the business. At that point a young Kyle Boatwright was hired on at Worthington as a sales associate to sell for the company. During Kyle’s early employment he was attending Troy University while working on a Master’s in Business Administration and had just completed his business degree in Marketing from Troy. After being at Worthington for over a year, Kyle approached the current managing partners of Worthington, with a financial partner, and asked for an opportunity of ownership. At the time Worthington was not in great shape and the owners agreed to “handover” the keys in exchange for assuming the debts that were accumulated by the company over the previous management. An agreement was reached and in 2003 Worthington was assigned over to Kyle and the financial partner and Worthington was re-incorporated into a new corporation – Worthington Millwork, LLC.

In 2005 Kyle purchased the 50% interest of the financial partner and is now 100% shareholder of the business. Since then Kyle has built the company from essentially a rundown business, that was in debt, into a multi-million-dollar business that has had great success over the past 13+ years to the great business that it is today. The previous owners and partners no longer have any influence in Worthington and the company continues to have great success in delivering high end, American made, architectural products across the United States and Abroad.
QUALITY MADE TO LAST A LIFETIME

Most of Worthington’s products are backed by a limited lifetime warranty as we are committed to ensuring the longevity of the products we produce. This assurance is part of meeting the expectations of our clients and part of delivering the best products in the industry. Quality is our utmost concern when producing your architectural products and has been for over 30 years. Our products have been trusted on both commercial and residential buildings across the country and specified by some of the most prominent architects in America. They have also been featured on many television shows such as Donald Trump’s “The Apprentice” as well as “The Late Show” with Stephen Colbert.

Our quality control team has high standards and requirements to ensure that our products do not leave the factory unless made to the highest level of quality. These standards are what set us apart from our competition and the imported products that other companies distribute.
At Worthington we believe it is important to manufacture and deliver only high quality American made architectural products and that is our motto: “American Made Architectural Products.” By doing so we are able to delivery and ensure industry leading quality assurance on each and every product that leaves our factories. We believe that the only way to ensure the highest quality and provide the assurance that what goes into each product is to personally oversee the production process. Since all of the manufacturing processes are in house in our factories (and Made in America!) we are able to ensure that each product meets the high quality standard as required by our clients. We stand behind this philosophy so sternly that it is our GUARANTEE that your order is FREE of charge if you receive an imported product from one of our facilities!
CUSTOMIZED TO FIT YOUR NEEDS

Though applications on certain projects could be similar; no two projects are the same. We have a high level of understanding at Worthington and that is why our experts are ready to accommodate any need from our clients. Whether it is to produce large architecturally correct columns or cornice for a historical replication, or if it is to simply add a chair rail around a dining room made from one of our standard parts, our sales associates are highly trained to work with you on the needs of your project. Each sales associate expert is highly trained and educated to guide a builder, architect or homeowner client through their estimating and ordering process.

Excellent customer service is also an important aspect of our corporate culture and is a way that we have maintained a great reputation through the years. In an ever-changing society and culture of technology, our customer service experts are available via e-mail, phone, or a scheduled visit to our sales center to sit down and discuss the requirements of any project. We are ready for your project!
IT PAYS TO STAY CONNECTED

WE MAKE IT SIMPLE TO STAY IN CONTROL OF YOUR PROJECT.

Worthington’s advanced website allows you as a homeowner, contractor or architect to review all of the information you need for any of our products from any device. As long as you have an internet access, our website is always available to our clients. You can request quotes, watch our YouTube informational and installation videos, see product dimension information, read great ideas and installation tips from our blog as well as review case studies and newsletter – The Monthly Column™. We strive to be as accessible as possible to each and every client and making sure our website is up to date and works on any device with internet access is of high importance for our web team.

WE’RE SOCIAL! GET CONNECTED.

Worthington’s social media team is always looking for a great conversation about high quality architectural products, design ideas, industry trends and building updates. Join the conversations by following us on any of the below social media sites!

### Bring us from the desktop to the job site with Worthington’s smartphone app. Available on the App Store and Google Play.

### Our catalog is available on WorthingtonMillwork.com for digital download and interactive viewing features.
At Worthington, we take pride in providing our customers exclusively with products that comply with the Federal Trade Commission’s Made in USA standard.

The Made in USA standard is highly regulated and very specific. According to the FTC, “marketers and manufacturers that promote their products as Made in USA must meet the “all or virtually all” standard.” That means all significant parts, processing and labor pertaining to the product must originate in the U.S.

The standard was established to prevent deception and unfairness in the marketplace. False or misleading claims can result in penalties.

Worthington places high importance on the Made in USA standard for several reasons:

**QUALITY**

For 30 years, we have made it a priority to manufacture high-quality architectural products that are unchallenged in the industry. We can ensure our clients that we are providing them with the highest quality as we follow the guidelines and regulations of the Made in USA standard.

Imports often come with warranties that are below the industry’s standards. Builders, contractors and owners therefore end up with unacceptable products. We offer the best warranties in the industry as we strongly believe in the quality of our products.

**LONGEVITY**

When contractors and homeowners consider the various offerings from companies from all over the world, they have to weigh the cost against the quality of the product. Many manufacturers lure with low prices, but looking for the cheapest buy can cost more money in the long run. Spending the additional money on high-quality, American-made products can save clients thousands of dollars on maintenance in the future. The FTC’s standard is proof for our clients that we are using top-grade materials in the manufacturing process, which helps us maintain the prime quality of our products.

**SAFETY**

Safety is another reason why we put so much emphasis on the Made in USA standard. Products manufactured in other countries often do not have to comply with the same guidelines that the FTC prescribes for American-made products. As a result, harmful additives, like lead and Freon, and inferior primers, paints, hardware and raw materials are used in these products. Defective Chinese drywall and toxic vinyl flooring are only a few examples for the lack of quality in imported products. Some Chinese products even contain chemicals that can cause cancer.

**VALUE**

In the end, the owners are paying for the products. As we strive to surpass the FTC’s requirements and our clients’ expectations, we want to ensure that the owners get the best possible value for their money. High-quality products with superior warranties establish Worthington products as highly valued commodities for any future project.

**Our Promise**

Every year, contractors, builders and homeowners fall victim to low-quality, imported architectural products.

At Worthington, we stand for keeping America strong. Through our commitment to only manufacture products that are Made in USA, we are supporting the American economy while we are creating new jobs in the U.S. We are so committed to this standard that we guarantee a full refund if you receive an imported architectural product from our company.

See the difference: When shining a small flashlight on the inside of a column base, you should not be able to see light pass through. This simple test shows the difference between a Worthington Class A fire rated column and a competitor’s, which does not meet the same fire standards.
The Best Products on the Market

Are your columns load-bearing?
Yes. All of WorthingtonStone™, WorthingtonCast™, WorthingtonFRP™, Aluminum, and a wide array of architectural wood columns are all load bearing as long as they are not split. Our WorthingtonWrap™ PVC column is our only column that must be installed with a structural support in a load bearing application.

How are the columns shipped?
Each column shipment is arranged with a pre-qualified freight carrier company from our network of reputable freight carriers. If shipping capitals and/or bases individually, and depending on the size of capitals and bases, we may use FedEx small package service.

Can I trim my columns to a shorter height?
Yes. All of our tapered columns come with the bottom 1/3 of the column non-tapered. If the column is non-tapered; you may trim to any specific height. Either way the column must be trimmed from the bottom of the shaft only.

If my columns are split, what type of adhesive do I need to reassemble them?
To reassemble a split Worthington Column, a polyurethane construction adhesive should be used. This product can be found at any hardware or construction supply provider or purchased directly from us. For our wood columns, any waterproof wood glue should be used.

If my columns are split, are they still load bearing?
Split columns are used for visual purposes only (aluminum is the exception). Once the column is cut vertically, it is no longer load-bearing.

Do I have to paint my columns?
It depends. If you are using one of our WorthingtonCast™, WorthingtonFRP™ or Paint grade wood columns then an oil-based or acrylic latex paint must be used. Our WorthingtonStone™ Columns come in a pre-finished material that, unless installation touch ups are needed, does not require painting.

FRP Fiberglass Columns
Does your balustrade system arrive pre-painted or primed?

Yes! Our WorthingtonUrethane™ balustrade system comes pre-painted with our factory white paint. The WorthingtonStone™ is pre-colored and has six colors to choose from and the WorthingtonCast™ arrives ready to be primed and painted on-site.

Can you pre-paint my railing for me a custom color?

Yes! We offer an option to pre-painting our Worthington Urethane™ balustrade systems to a specified color and sheen of your choice! This can save you a great deal of time. Please all us at 1-800-872-1608 for more information and to request this when you are getting an estimate from us.

What is the lightest balustrade material to get?

The lightest material in our Balustrade System is the Worthingtonurethane™. Despite being lightweight it is still structural and will pass all of the building codes!

What type of adhesive can I use to attach your system?

Worthington strictly recommends that you use Loctite PL-Premium (made by the Henkel Corporation) Urethane-based adhesive for our polyurethane products. Using damage the product and void the warranty. Liquid Nails can be used on our Worthington-Stone™ System.

Do all of your balustrade systems pass the building codes?

Yes! All of our balustrade systems have been tested and meet either the BOCA or ICC building codes. We have tested them all and they meet or exceed the requirements for both residential and commercial use.

Who do you recommend to install your balustrade systems?

Typically a skilled carpenter is the type of person that is needed to install any of our three systems.

* Aluminum Does Not Rust
At Worthington, we do not just value quality. While we strongly focus on manufacturing top-grade quality products, we also want to ensure that we offer a design that appeals to the taste of every client.

A Design That’s Distinctly Yours

No matter if our clients are looking for columns, balustrade or railings, our architectural products can enhance every project and add style, personality and elegance to every home.

Naturally, every client has a different taste, need and design wish, so we want to make sure that we offer a great variety of products.

Our products can also be customized. We offer different colors, shapes, materials and sizes to meet our client’s every need and taste.

We are proud that we can provide our clients with customized products to make every project specifically their own. The options are endless.
At Worthington, we want to make sure that our clients get exactly what they envision. We offer a variety of American-made columns that differ in material, design, shape and size to fit every taste and need.

**CAST FIBERGLASS COLUMNS**

The WorthingtonCast™ fiberglass columns are our best-selling architectural columns as they add style and personality to any home.

**FRP FIBERGLASS COLUMNS**

WorthingtonFRP™ fiberglass columns are our most dynamic as they combine strength and durability. These fully fiber-reinforced polymer columns offer a lightweight, yet strong, load-capacity for up to 20,000 pounds.

**ALUMINUM COLUMNS**

Aluminum columns are a common choice among clients due to the many benefits. Aluminum columns are load-bearing, virtually maintenance-free and have a powder coat paint finish.

**POLYMER STONE COLUMNS**

Our unique WorthingtonStone™ polymer stone columns consist of highly durable polyester resins to imitate the look and feel of real cast stone. The weight, however, is only 50 percent of standard stone columns. These columns also have Class A fire rating.

**PVC COLUMNS**

The WorthingtonWrap™ PVC columns are made of cellular PVC and are our most versatile columns. These lightweight columns are customizable and can be painted. This type of column is maintenance-free, impervious to insects, and backed by a limited lifetime warranty.

**WOOD COLUMNS**

Wood columns are a popular choice for projects that have to meet a specific criteria. These columns feature historical integrity, can be customized and are architecturally correct.

PLANNING A PROJECT? USE OUR COLUMN BUILDER TOOL FOR PRICING.

www.worthingtonmillwork.com/column/
At Worthington, we want to make sure that we can satisfy any project need, design idea and budget. We have a solution for every client’s request, no matter if the project is commercial or residential or if the client is looking for a painted look or finished product.

We offer a versatile selection of balusters and balustrade systems in a variety of different materials. Our choices include polyurethane, polymer stone and fiberglass balustrade. Additionally, we provide different styles of porch balusters and rail widths.

Our balustrade systems all comply with or exceed the building code requisites of BOCA and ICC for guard rails, and all of our porch balusters can be spaced to meet the four-inch sphere rule required by most codes. We also offer balusters that meet the 36-inch and 42-inch rail heights required by the residential and commercial building codes.

To make sure that you can enjoy our products for a long time, most of our balustrade come with a limited lifetime warranty for commercial and residential applications. Our leading competitor only offers a limited lifetime warranty on residential and a four-year warranty for commercial applications.

On our polyurethane balustrade system, we also provide pre-painted options with the color and sheen of your choice. Our clients can simply visit their local hardware store to pick out the color and sheen of any Behr® paint color.

We also offer to replicate an existing baluster. If a client wants to send a baluster from a project to our facility, we can customize our balusters to be an exact match.

At Worthington, our options and choices for balusters and balustrade systems are seemingly endless. We want to ensure that we can offer the right fit for each individual wish and need.

The WorthingtonStone™ polymer stone balustrade system looks and feels just like stone and adds curb appeal, elegance and style to any home. We offer six different colors, but custom colors are also available. This type of balustrade system is maintenance-free.

The polyurethane balustrade is our most popular choice as it is highly durable and lightweight. We offer pre-painted options and a great variety of designs and sizes for balusters and rails. This balustrade system with its many choices adds beauty and elegance to every home and business.

Our WorthingtonCast™- Fiberglass (FRP) balustrade system has very few maintenance requirements. A coat of paint will ensure longterm beauty and elegance. This balustrade system is very stout and a perfect substitute for wood. It will be just as strong in 20, 30 or 100 years as it was on the day of installation.
Worthington is proud to introduce its new pergola systems. Available in standard and premium styles. Our kits are available in two different width configurations.

The stands and premium kits both include four 10-foot round WorthingtonCast™ fiberglass columns with a Tuscan-style base and capital.

We believe in the high quality of our products. Both pergola system kits are backed by a 25-year warranty.

CUSTOM PERGOLA SYSTEM

Worthington’s new custom pergola system line is designed to offer endless possibilities in design, size and features that accommodate almost every client’s need and vision.

We have created many custom pergolas for development entrances, roof top applications and as additions to existing or new homes and offices.

Our clients simply need to submit their plans and drawings of a pergola system, so we can custom design the system and match heights and sizes accurately.

The custom capabilities of our CNC router allows us to create any square PVC column simply from a plain design. The highly involved, raised panels can then be customized, so we can create the client’s envisioned pergola.

CUSTOM TRELLISES

Our trellis system is constructed of high-quality cellular PVC, and the design options of our new custom trellis product line are endless. No matter if our clients envision a newly designed trellis on the side of a house or if they plan to replace an existing trellis, Worthington will design, create and ship a custom trellis according to every client’s need.

To ensure that our clients receive exactly what they want, our staff will gladly stand by to assist with every design and individual project.

SPEAK TO A KNOWLEDGEABLE REPRESENTATIVE FOR PRICING. 800.872.1608
Porch railings are the affordable way to add character and style to any home.

We offer two different options for railing systems, the Worthington custom PVC railing and our aluminum railing system. Both railing systems come with a variety of customizable options, like color, size and design.

ALUMINUM

The aluminum railing kits are very popular among our clients as they are very low in cost and rust-free. We also offer a great variety of color options to fit the exterior of every home. Another benefit of this kit is the easy installation. The balusters connect to the rail with a rubber mallet.

Our rail kits come complete with a top rail, bottom rail, pre-installed baluster connectors, mounting brackets for top and bottom rails, bottom rail support, two pieces of two-sided tape for the top brackets and the round or square balusters, one 5-inch bit for the install and hardware, which includes stainless steel screws and grommets for the bottom rail support blocks.

STANDARD PVC. CUSTOM PVC

The Worthington custom PVC railings come with a long list of benefits. This system includes superior weatherability rails that can be compared to the color retention and weatherability of vinyl sidings. This system will not decay, warp, rot or twist.

Our PVC railings are the perfect replacement for wood constructions as they offer the traditional look of wood but without possible splinters and splits. This system is also the perfect fit for every climate. It can withstand extreme temperatures without softening in the heat while it is highly resistant to cold weather.

Worthington’s custom PVC railings feature the highest quality in the industry, and we can guarantee 10 years without defects in material and workmanship when properly installed, which we back with a 10-year limited warranty.

Our aluminum railing systems feature classic lines that will enhance any architectural setting. The extruded, machined brackets are sturdy, durable and easy to install. To make our product even more valuable, every aluminum railing kit comes with a 15-year warranty.

The Worthington PVC railing is a perfect fit for almost every exterior enclosure project as it is impervious to insects. It is designed to be the perfect alternative to wood. Each system comes with easy-to-follow instructions, which makes for a quick and simple assembly. No special tools are required.
Polyurethane products are just another example of the high-quality standard we set for ourselves and our clients.

Our polyurethane products are also ozone-friendly since they are completely free of HCFC and CFC, which the U.S. Environmental Protection Agency lists as ozone-depleting chemical compounds. Additionally, the technology we are using to manufacture these products is patented and proven to be environmentally friendly.

All materials and products at Worthington comply with the Made in USA standard, and we make no exception with our polyurethane products.

All polyurethane products are manufactured with American-engineered and designed chemicals that are made from high-density, rigid, closed cell polyurethane foam, which prevents water penetration and absorption.
